PROFILE

Unity / C# game developer with several years of experience building mobile games, holding an MSc in Artificial Intelligence. Has shipped titles on Android and iOS across match-3, puzzle, card, idle, multiplayer and action genres. Experienced in LiveOps events, online multiplayer (Photon PUN, FishNet), iOS porting, performance optimisation and leading a development team as Scrum Master. Particularly interested in AI and cognitive games: both degree projects were cognitive games, including research tools for assessing children's memory and attention.

PROFESSIONAL EXPERIENCE

Senior Game Developer · Medrick Game Studio — Oct 2025 – Present · Tehran, Iran

- **Golmorad** (match-3, 6 months): developed and shipped 6 in-game LiveOps events, including Space Mission, Swamp Quest, Mini Missions and Journey Offer, on the project's semi-hexagonal architecture, with GameAnalytics tracking, debug tools and Unity Addressables.
- Implemented permanent events alongside seasonal ones, and maintained and managed the project's early builds.
- **Hokm Plus**: added English and Arabic localisation, and moved the client's communication layer onto a redesigned backend by rewriting its interfaces and adapters.
- **Mench Baz**: ported the Android game to iOS, fixed platform-compatibility issues, verified ads, analytics and voice chat, and tested the first build on real devices.
- Prepared and tested the company's first iOS builds, and automated the localisation workflow with n8n.

Junior Game Developer · Baxter Game Studio — Feb 2024 – Apr 2025 · Remote, UK

- Developed a game from scratch to release and managed each stage of its development.
- Optimised performance by analysing benchmarks, managing memory and reducing GC allocations, cutting unnecessary LINQ usage and runtime allocations, and switching TextMeshPro text from dynamic to static where appropriate.
- Fixed GPU-related frame drops by optimising visual effects and particle systems, and optimised the game's ad system.
- **Merge Planes Idle Tycoon**: shipped new features, published iOS and Android builds, maintained the live game and integrated several ad packages.

Junior Game Developer · Epicade — Dec 2022 – Dec 2023 · Tehran, Iran

- Developed core features for **Battle Cry**, a 2D online 1v1 mobile game built around seven mini-games, including character selection, random mini-game choice and character abilities.
- Implemented the online multiplayer infrastructure with FishNet, keeping game state and match flow in sync.
- Found and fixed in-game bugs, and led the development team as Scrum Master, running sprints and coordinating daily work.

Intern Game Developer · IUST Game Hub — Feb 2022 – Oct 2022 · Tehran, Iran

- Led a team that won the "Selected Team" title at the Corey Games development competition, sponsored by Hamrah-e Aval, for the game *Battle Cry*.

SELECTED PROJECTS

Cognitive Temple · *MSc thesis · Unity · research game for children aged 6–12*

- Story-driven 2D game linking four cognitive mini-games (word memory, colour–text attention, visual tracking and a Corsi-style spatial memory task), with a configurable progression system and logging of scores, response times and paths to JSONL/CSV for research analysis.

Battleship (Hex) · *Personal · Unity · Photon PUN*

- Turn-based naval strategy on a hexagonal grid with drag-and-drop placement, 60° rotation and collision checks; ship abilities (radar, sonar, mines, shields, airstrikes) defined in ScriptableObjects; single-player AI and online multiplayer with Photon PUN.

Top-Down Defense · *Personal · Unity · solo*

- Survivor.io-style survival action game: Spine characters with runtime IK control, an ability selection system, and 10 attack types assigned to bosses using the Strategy Pattern.

Marble Sort (Marble Chin) · *Solo, end to end · released on Cafe Bazaar*

- Colour-sorting puzzle game built from scratch: track and container mechanics, increasingly difficult levels with hidden colours and locked containers, magnet and swap boosters, a Persian UI and saved progress.

The 100 Competition · *Interactive system for a live TV game show*

- Maintained and improved the system behind Iran's largest televised trivia show (5 seasons × 12 episodes): fixed stability issues, built a Debug Mode, and prepared builds and updates for each new season.

Rotate Rings · *Personal · Unity puzzle*

- Ring-rotation and piece-sliding mechanics with movement constraints and collision logic, automatic connection checks with burst effects, and 10 levels with a full game loop and saved progress.

EDUCATION

MSc Artificial Intelligence · University of Tehran — Sep 2024 – Dec 2026 (expected)

- Thesis: a research-based cognitive game in Unity that measures children's memory and attention.
- Active member of the Game and Robotics Laboratory, developing game-based cognitive projects for detecting disorders.

BSc Computer Engineering · Iran University of Science and Technology — Sep 2019 – Aug 2023

- Final project: a cognitive game for children with developmental disorders. Active member of the university's Game Hub.

SKILLS

Languages & Frameworks	C#, Python, .NET, Photon PUN, FishNet, Unity Addressables
Tools	Unity, Visual Studio, Rider, Git, Xcode, Android Studio, Spine, GameAnalytics, n8n
Expertise	Gameplay programming, online multiplayer, LiveOps & in-game events, performance optimisation, iOS & Android builds, architecture & design patterns, analytics & ad integration, localisation, 2D animation (Spine & IK), cognitive & research games, debugging tools
Ways of working	Scrum (Scrum Master experience), team leadership, solo and team-based development
